

Water Audit Program For Large Water Users

Hunter Water is committed to promoting the efficient use of water throughout its area of operations.

Background

Hunter Water is offering water audits through its 'Business Water Efficiency Program' to gain a better understanding of water demand patterns and help large customers reduce water usage.

Based on past results, it's expected that sub-metering and monitoring systems for major customers in conjunction with water audits would result in water savings of at least 5%.

Due to the diversity of the commercial and industrial sector, an individual approach is taken by Hunter Water when assisting large customers to use water more efficiently.

Costs

The cost of smart metering, sub-metering and auditing will vary between sites with the customer usually expected to fund the majority of the cost.

Water audits cost upwards of \$5,000 depending on water usage and complexity of the site.

Hunter Water is providing up to \$20,000 subsidy towards the water audits as part of the program.

Benefits

Water audits

- Identify leakage and alert customers of

excess usage.

- Monitor peak usage times and irregular usage patterns.
- Provide detailed analysis of water usage.
- Provide water conservation opportunities.
- Provide re-use opportunities.
- Offer branding and reputation for becoming water efficient.
- Assist with benchmarking.

Eligibility

To be eligible for the Water Audit Program, the customer must:

- Be a Hunter Water customer.
- Be invited by Hunter Water.
- Use at least 30,000kL per year.
- Read and accept the terms and conditions of the Program.
